Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/14/03 has been entered.

2. Claims 1-34 have been canceled. Claims 35-43 have been added and are the only remaining claims present in the application.

Claim Rejections - 35 USC § 103

3. Claims 35-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Giesecke (4,568,570) or Matuzaki et al. (4,734,299) in combination with Dafter, Jr. (4,035,500).

Giesecke (4,568,570) or Matuzaki et al. (4,734,299) both teach applying a aqueous activating solution which can comprise silver (I) onto a substrate, reducing the activator and electroless plating to form the conductive lines.

Giesecke (4,568,570) or Matuzaki et al. (4,734,299) fail to teach activating metals such as silver (II), Fe (II), as well as other activating metals with higher valences.

Dafter, Jr. (4,035,500) teaches method of depositing a metal on a surface of a substrate. An activating metal is applied to the substrate, reduced/revived to catalytic metal and then

electrolessly plated (abstract). Dafter, Jr. (4,035,500) teaches the activating metal can be Ag, Fe, Rh, Ru etc. which is reduced from a higher valence state "+2" to the elemental state "0" for catalytic purposes (col. 2, lines 15-50).

Therefore, it would have been obvious for one skilled in the art at the time the invention was made to have modified Giesecke (4,568,570) or Matuzaki et al. (4,734,299) process by incorporating the activating metals as detailed in Dafter, Jr. (4,035,500) because of the expectation of achieving similar results.
